

IAAMCS Fellowship Writing Workshop Series Overview

Are you considering graduate school or currently enrolled in a master's or PhD program in Computing? Do you need funding or need additional funds to fill in the gaps to support your studies and complete your degree? Please consider joining us for the Fellowship Writing Workshop Series to learn about fellowship opportunities and receive personalized feedback on key components of an application.

All are welcome to participate, whether for the entire series or a one-time drop-in. The goal of this series is to equip participants with greater knowledge of fellowships, review multiple fellowship opportunities, as well as encourage those who engage to plan, write and receive personalized feedback to assist in the development of stronger fellowship applications.

During the series, we will:

- Go over top tips and lessons learned from fellowship awardees
- Answer questions like “How do I apply?” and "Where do I apply?”
- Review IAAMCS Select Fellowship List and provide information on other Computer Science Awards, Scholarships & Fellowships
- Use the NSF Graduate Research Fellowship (GRFP) as a reference/guide to help you develop your fellowship proposal
- Discuss what makes a strong application: Personal, Relevant Background and Future Goals and Graduate Research Plan Statements as well as Submission Development
- Run through iterations of your proposal and allow time for live, peer-feedback and follow-up feedback from experts
- Explore other parts of a fellowship application: eligibility, reference letters, proposed field(s) of study, education, work, and other experiences
- Develop summer plans that you might use to present and enhance your proposal
